

HOW TO PUT YOUR PROMPT LIBRARY ON GITHUB

A Step-by-Step Guide for Complete Beginners

From Zero Account to Professional Portfolio — No Coding Required

WHAT IS GITHUB AND WHY DO YOU NEED IT?

GitHub is a free website where developers and professionals store and share their work publicly. Think of it like a professional portfolio website — but for technical work. When you upload your Prompt Library to GitHub, it gets its own link (like github.com/yourname/truck-rental-prompts) that you can put on your resume and share with employers.

Employers in AI and tech will almost always check your GitHub. A real project on GitHub is worth 10x more than just writing 'prompt engineering skills' on a resume.

STEP-BY-STEP PROCESS

1

Create Your Free GitHub Account

Go to this website in your browser:

<https://github.com>

- Click the green 'Sign up' button in the top right corner
- Enter your email address (use a professional one if possible)
- Create a username — use your real name or something professional like: rohan-sharma-ai or rohanprompteng
- Create a password and click 'Create account'
- Verify your email — GitHub will send you a confirmation code

■ *TIP: Choose your username carefully — it will appear in your portfolio link forever. Use your name or a professional handle. Avoid numbers like john123.*

2

Set Up Your Profile

Once logged in, click your profile picture (top right) and go to 'Your profile':

- Click 'Edit profile' button
- Add your Name (your real full name)
- Add a Bio — example: 'Prompt Engineer | Truck Rental & Logistics Domain Expert | CS Diploma — Douglas College'
- Add your location: Surrey, BC, Canada
- Upload a professional profile photo (a clear headshot)
- Click 'Save' at the bottom

■ *TIP: A complete profile with a photo looks 3x more professional to recruiters. This takes 5 minutes and makes a big difference.*

3

Create a New Repository (Your Project Folder)

A 'repository' (or 'repo') is simply a folder on GitHub where your project lives. Here is how to create one:

- Click the '+' icon in the top right corner of GitHub
- Click 'New repository'
- Repository name: type exactly this:

```
truck-rental-ai-prompt-library
```

- Description: type — 'AI prompt library for truck rental customer service — reservations, scheduling, billing & complaints'
- Select 'Public' (so employers can see it)
- Check the box 'Add a README file' — this is important
- Click the green 'Create repository' button

■ *TIP: Your repository is now live! Your project link already exists as:
github.com/YOUR-USERNAME/truck-rental-ai-prompt-library*

4

Write Your README File (Your Project Introduction)

The README is the first thing anyone sees when they visit your project. GitHub will show it automatically. Click on the README.md file and then click the pencil icon to edit it. Replace everything with this template:

```
# Truck Rental AI Prompt Library A professional collection of optimized AI prompts for the truck rental industry, built from real customer service experience. ## About This Project This library contains 10+ prompts covering: - Reservations & bookings - Scheduling conflicts - U-Box & trailer reservations - Billing & pricing disputes - Complaint handling ## Built By Your Name | CS Diploma, Douglas College Prompt Engineer | Truck Rental Domain Expert ## Tools Used Claude Sonnet, ChatGPT-4o
```

- After editing, scroll down and click 'Commit changes' (this saves your work)
- In the popup, click 'Commit changes' again to confirm

■ *TIP: The README uses Markdown formatting. The # symbol creates a heading, ## creates a smaller heading, and - creates bullet points. This is all you need to know.*

5

Upload Your Prompt Library PDF / Word Document

Now upload the actual prompt library files you already created:

- On your repository page, click 'Add file' button
- Click 'Upload files'
- Drag and drop your PDF and Word document files onto the upload area — or click 'choose your files' to browse
- Wait for the files to finish uploading (you will see a green checkmark)
- Scroll down and click 'Commit changes' to save

■ *TIP: Upload both the PDF and the Word document. Having both formats shows professionalism and makes it easy for any employer to open your work.*

6

Create a Folder Structure for Your Prompts

To look even more professional, organize your prompts into folders. Here is the recommended structure:

```
truck-rental-ai-prompt-library/ | |-- README.md |-- Truck_Rental_AI_Prompt_Library.pdf
|-- Truck_Rental_AI_Prompt_Library.docx |-- prompts/ |--
01_reservations_and_bookings.md |-- 02_scheduling_conflicts.md |--
03_ubox_and_trailers.md |-- 04_pricing_and_billing.md |-- 05_complaints.md |--
screenshots/ |-- prompt1_output.png |-- prompt2_output.png
```

To create a new file in a folder: click 'Add file' > 'Create new file' > type the path like:
prompts/01_reservations_and_bookings.md

■ *TIP: You do not need all folders on day one. Start with just the PDF and README. Add folders and files gradually as you build more prompts.*

7

Add Screenshots of Your AI Outputs

Screenshots are the most powerful evidence of your skill. Here is how to add them:

- Open Claude or ChatGPT in your browser
- Type one of your optimized prompts and run it
- Take a screenshot of the full response (Windows: Win+Shift+S | Mac: Cmd+Shift+4)
- Save the screenshot with a clear name like: prompt1_booking_output.png
- Upload to the screenshots/ folder on GitHub using 'Add file' > 'Upload files'
- In your README, reference the screenshot like this:

```
![Prompt 1 Output](screenshots/prompt1_booking_output.png)
```

■ *TIP: A screenshot showing your prompt producing a professional, helpful AI response is instant proof of your skill. This is what separates a good portfolio from a great one.*

8

Get Your GitHub Link and Add It to Your Resume

Your project is now live! Here is how to find and use your link:

- Go to your repository page on GitHub
- Copy the URL from your browser address bar — it looks like this:

```
https://github.com/your-username/truck-rental-ai-prompt-library
```

- Add this link to your resume under your Projects section like this:

Truck Rental AI Prompt Library github.com/your-username/truck-rental-ai-prompt-library
Designed 10+ optimized prompts for AI-powered customer service in the truck rental industry. Covers reservations, scheduling conflicts, U-Box bookings, billing disputes, and complaint handling. Tested on Claude and ChatGPT.

- Also add it to your LinkedIn profile under 'Featured' or 'Projects' section

■ *TIP: Test your link by opening it in a private/incognito browser window to make sure it is publicly visible before sending it to employers.*

9

Keep Growing Your Project Over Time

A GitHub project that is actively updated looks much better than one that was uploaded once and never touched. Here is a simple growth plan:

- Week 1: Upload your 10 starter prompts (done already!)
- Week 2-3: Add 10 more prompts — aim for 20 total
- Week 4-5: Add screenshots for your best prompts
- Month 2: Add a second project — for example, a Zapier automation workflow
- Month 3: Reach 40+ prompts and 5+ screenshots — this is a complete professional portfolio

■ *TIP: Every time you update your GitHub project, it shows as recent activity on your profile. Employers can see you are actively working and improving — this builds trust.*

10

Share Your Work Publicly on LinkedIn

The final step is making sure people know your project exists. Post this on LinkedIn after your project is live:

I just published my first AI portfolio project on GitHub. I built a Truck Rental AI Prompt Library – a collection of optimized prompts for customer service in the logistics industry, covering: - Reservations & bookings - Scheduling conflicts - U-Box & trailer inquiries - Billing disputes - Complaint handling Each prompt shows a before (basic) vs after (optimized) comparison with real AI outputs. Built from 4 years of real customer service experience. Link: github.com/your-username/truck-rental-ai-prompt-library
#PromptEngineering #AI #MachineLearning #TruckRental

■ *TIP: Post this on a Tuesday or Wednesday morning for maximum visibility. Tag relevant companies or people in the logistics/AI space if you know any.*

QUICK REFERENCE SUMMARY

Step	Action	Time Needed
1	Create GitHub account	5 minutes
2	Set up your profile	5 minutes
3	Create repository	3 minutes
4	Write README introduction	15 minutes
5	Upload your PDF & Word files	5 minutes
6	Create folder structure	20 minutes
7	Add screenshots of AI outputs	30 minutes
8	Copy link and add to resume	10 minutes
9	Keep adding prompts weekly	Ongoing
10	Post on LinkedIn	10 minutes

Total time to complete all 10 steps: approximately 2 hours. Your GitHub portfolio will be live and shareable with employers the same day.

This guide was created as part of a prompt engineering career development project. No coding required — just follow each step in order.
